

MyHTTP Server for Switch "All In One" v4.0

Download and install NSP/NSZ games directly from your Android device using DBI and MyHTTP Server for Switch.

Changelog v4.0

- Improved user interface with dedicated screens for each function.
- Added language selector.
- Added English language support.
- General stability and navigation improvements.

Requirements

- Android device or tablet.
- Nintendo Switch with DBI installed.
- Both devices connected to the same Wi-Fi network.
- Required permissions granted to the application.

Important Notes

- You can also share your phone's 4G/5G mobile connection with the console using a Wi-Fi hotspot.
- This app is intended as an alternative solution for users without PC access or with USB connection issues.
- For daily use, DBI MTP Responder is faster and more efficient.
- A tutorial video demonstrating the real-time installation process for Option 2 is available in the Tutorials section.

Main Features

- Torrent download manager.
- Multi-part archive extractor.
- HTTP server for installing games through DBI.
- Automatic detection of NSP and NSZ files.

OPTION 1 — Download Games via Torrent

1. Download the .torrent file for the game from the bot or any Telegram group.
2. Select the destination folder.
3. Choose the .torrent file to start the download.
4. The app will automatically display download progress, speed, and connected peers.
5. Once the download is complete, you can stop sharing by pressing 'Remove'.

OPTION 2 — Install Existing NSP/NSZ Files

1. Open the application and enter 'HTTP Server'.

2. Select the folder where your NSP or NSZ files are stored.
3. Press 'Start Server'.
4. Follow the instructions in the 'Install Games with DBI' section.

OPTION 3 — Extract Multi-Part Archives

1. Open the application and press 'Select SD Folder'.
2. Locate the folder containing the split archive files.
3. Select the files in order: .001, .002, .003, etc.
4. The files will be extracted automatically into the selected folder.

Install Games with DBI

1. Select the folder containing your NSP/NSZ files.
2. Press 'Start Server'.
3. The application will display an HTTP IP address.
4. Launch DBI without Applet Mode by holding R + A while opening any game.
5. In DBI, open 'Browse FTP/HTTP/GitHub Server'.
6. Enter the IP address shown on your phone (example: <http://192.192.192.1:8080>).
7. Press the '+' button on the console to connect.
8. Select the files using the X button.
9. Selected files will appear highlighted.
10. Press A to continue.
11. Make sure the SD card is selected as the installation destination.
12. Choose 'Start Installation'.
13. To exit DBI, press B until you return to the main menu.

Troubleshooting

- **DBI cannot detect the server:** Make sure both devices are connected to the same network.
- **Games do not appear:** Verify that you selected the correct folder.
- **Connection error:** Disable AP Isolation or Client Isolation in your router settings.
- **Installation fails:** Check that the NSP/NSZ file is not corrupted.

Important Warning

Always verify your anti-ban protection settings before connecting a modified console to the Internet. Online use is the user's responsibility.

Remember to close the application when finished to avoid unnecessary data usage.
